

Asterisk CLI Module

THIS WIKI HAS BEEN UPDATED FOR VERSION 13 OF YOUR PBX GUI

What is the Asterisk CLI Module used for?

The Asterisk CLI Module allows users to pass Asterisk CLI commands from the web interface and shows the resulting output.

How is the Asterisk CLI Module related to the other Modules?

Commands here affect asterisk directly and may indirectly affect any module that gets information from asterisk.

How Do I Get to the Asterisk CLI Module?

- Log in to the PBX GUI.
- In the top menu click **Admin**.
- In the drop down click **Asterisk CLI**

Usage

Asterisk CLI

CLI Command	<input type="text"/>	Send Command
-------------	----------------------	--------------

- Enter the desired Asterisk CLI command into the text box.
- Press **Send Command**.

In a console:

```
root@localhost:~ 80x11
localhost*CLI> core show channels
Channel          Location          State  Application(Data)
0 active channels
0 active calls
0 calls processed
localhost*CLI> 
```

In the Browser:

Asterisk CLI

CLI Command

Send Command

```
Channel          Location          State  Application(Data)
Message/ast_msg_queue (None)  Up      Hangup()
0 active channels
0 active calls
67401 calls processed
```
