

Class of Service

THIS WIKI HAS BEEN UPDATED FOR VERSION 13 OF YOUR PBX GUI

Commercial Module

The Class of Service Administration module provides granular control at the extension level to access and set permissions of specific calling features of your PBX. These features include Outbound Routes, Feature Codes, Ring Groups, Queues, Conference Rooms, Voicemail Blast Groups, and Paging.

Class of Service

ALLOW overrides DENY (If an extension is assigned to conflicting CoS's, the calculated permission is ALLOW)
(This may be changed in [Advanced Settings](#))

Extensions that are not assigned to a Class of Service have full access

For further information, please visit the [wiki](#)

COS Name

Members	Routes	Feature Codes	Ring Groups	Queues
Conferences	Paging	VoiceMail Blasts	Contact Groups	
Include		Exclude
