

Voicemail Notify

Voicemail Notify

THIS WIKI HAS BEEN UPDATED FOR VERSION 13 OF YOUR PBX GUI

Commercial Module

Voicemail Notify (also known as "VM Notify") lets you configure a voicemail notification to monitor a mailbox for new messages. When a caller leaves a message in that voicemail box, the system will call the recipients you have listed until one of them accepts responsibility for the message. The system will simultaneously call all the numbers listed in the first priority level. Then, if no one accepts the message, the system will call all the numbers in the next priority level, and so forth, until it runs out of priorities to call. It will then retry the entire list if it is configured to do so.

You can optionally configure the system to notify you via e-mail when a voicemail notification is complete. You can customize the e-mail's subject and body, and choose whether to attach the voicemail sound file to the e-mail.
