  - Password Type
    - Crypt
    - Plain Text
  - Read Only

Introduction

The Asterisk REST Interface User module is used to create users for the Asterisk Rest Interface.

- This module requires an Asterisk version greater than 12.
- This module must be enabled under Advanced Settings

Logging In

- Log in to the FreePBX UI.
- On the top menu click Settings
- In the drop down click Asterisk REST Interface User

First Run

The module may be disabled under advanced settings.

- On the top menu click Settings
- In the drop down click Advanced Settings

Enable the Asterisk REST Interface

Whether or not the Asterisk REST interface should be enabled.

Pretty Print JSON Responses

Should the JSON responses be made "Pretty"

Adding User
Add Asterisk REST Interface User
