

Custom Extensions User Guide

THIS WIKI HAS BEEN UPDATED FOR VERSION 13 OF YOUR PBX GUI.

- Overview
 - Logging In
 - Creating a Custom Extension
 - Custom Extension
 - Description
 - Notes
 - Save

Overview

The Custom Extensions module provides you with a facility to register any custom extensions or feature codes that you have created in a custom script or dialplan when the PBX doesn't otherwise know about them. This makes the Extension Registry aware of your own extensions so it can detect conflicts or report information about your custom extensions to other modules. Also, this helps prevent you from creating a duplicate extension number somewhere else in the PBX.

Logging In

- On the top menu click **Admin**
- In the drop down click **Custom Extensions**

Custom Extensions

Custom Extensions provides you with a facility to register any custom extensions or feature codes that you have created in a custom file and FreePBX doesn't otherwise know about them. This allows the Extension Registry to be aware of your own extensions so that it can detect conflicts or report back information about your custom extensions to other modules that may make use of the information. You should not put extensions that you create in the Misc Apps Module as those are not custom.

+ Add Extension	<input type="text" value="Search"/>

Creating a Custom Extension

For each custom extension, you can define the following:

Add Custom Extension

Custom Extension [?](#)

Description [?](#)

Notes [?](#)

Custom Extension

Define the custom extension number that you want the PBX to be aware of. You will not allowed to use the number for something else.

Description

Give this custom extension a friendly name.

Notes

Here you can enter notes on what this custom extension is used for.

Save

When done, don't forget to click the **Submit** button followed by the red **Apply Config** button in order to save and apply your changes.
