Sending Voicemail to Multiple E-Mail Addresses

If you are using the FreePBX Distro / PBXact / Sangoma PBX 5.211.65-X or greater, we have patched Asterisk to allow setting more than one email address for the voicemail-to-email feature.

To enter multiple e-mail addresses:

- Go to Applications Extensions
- Click on the edit button for the desired extension.
- Click on the Voicemail tab.
- For Email Address, enter the e-mail addresses separated by commas (,).

Now, any time a voicemail is left for this extension, the message will be sent to all of the e-mail addresses entered.
