

Version 13.0 Installation

FreePBX Version 13.0 Supports Asterisk 11 as minimum, and PJSip in Asterisk versions 12 and 13.

*Supported/Tested *nix Distributions*

Distribution	Date Last Tested	Certified	Tested	Commercial Module Support	Notes
CentOS 6	2016-02-08	No	Yes	Yes (Install)	The "recommended" distribution for FreePBX
CentOS 7		No	Yes	No	The "recommended" distribution for FreePBX
Debian 8.1	2015-07-31	No	Yes	No	Complete runthrough done using 'netinst' ISO
Ubuntu 14.04	2015-07-31	No	Yes	No	Run successfully completed several times

To reduce download and install time, please be aware that of these instructions give you a **minimal** install. This is enough to provide for basic PABX functionality, but you should go to Module Admin, and select 'Check Online' to download the additional modules after installation. There are approximately 50 additional modules that can be installed.
