

TFTP server

About

FreePBX Distro uses a TFTP (trivial file protocol transfer) server to serve out phone configuration and firmware files using the TFTP protocol.

Default configuration information

- the TFTP server is started by xinet.d (see "/etc/xinetd.d/tftp")
- the TFTP server binary is "/usr/sbin/in.tftpd"
- the TFTP data directory is "/tftpboot"
- TFTP logging is to syslog ("/var/log/messages")

Administration

- [Enable TFTP verbose logging](#)
- [View TFTP requests from phones](#)
