

Set CallerID Module

THIS WIKI HAS BEEN UPDATED FOR VERSION 13 OF YOUR PBX GUI

What is the Set CallerID module used for?

The Set CallerID module is a simple and effective way to manipulate callerID to help identify who is calling, use the proper greeting for a caller, give priority or even handle calls from multiple companies. The module allows you to change the callerID of a call and then continue on to the desired destination.

How is the Set CallerID module related to the other modules?

This module is a pass-through module and will affect anything downstream that uses caller ID. This module is related to any module that can select a destination, because Set CallerID can be used as a destination. This module is also related to any module that can be used as a destination, because this module requires a destination to be set.

How do I get to the Set CallerID module?

- Log in to the PBX UI.
- On the top menu click **Applications**
- In the drop down click **Set CallerID**

Usage
