

View TFTP requests from phones

Prerequisites

- [Enable TFTP verbose logging](#)

Procedure

- Tail syslog and only look at messages from in.tftpd

```
tail -f /var/log/messages | grep in.tftpd
```

- If any TFTP log events have occurred in the last 10 messages in /var/log/messages, they will be displayed
- New messages will be displayed as they are logged
- Reboot a phone and watch for TFTP requests
- Press Control-C to return to the shell prompt
