Fax Configuration

What is the Fax Configuration Module Used For?
Fax Configuration adds configurations, options, and a GUI for inbound faxing.

How do I get to the Fax Configuration Module?
- In the top menu click Settings
- In the drop down menu click Fax Configuration

Settings

Fax Options

Fax drivers supported by this module are:
- Spandsp based app_fax (res_fax_spandsp.so)

- Default Fax header
- Default Local Station Identifier
- Outgoing Email address
- Email address
- Error Correction Mode: Yes  No
- Maximum transfer rate: 14400
- Minimum transfer rate: 14400
- Default Paper Size: Letter  A4

Default Fax Header
Header information that is passed to remote side of the fax transmission and is printed on top of every page. This usually contains the name of the person or entity sending the fax.

Default Local Station Identifier
The outgoing Fax Machine Identifier. This is usually your fax number.

Outgoing Email address
Email address that faxes appear to come from if “system default” has been chosen as the default fax extension.

**Email address**

Email address that faxes are sent to when using the “Dial System Fax” feature code. This is also the default email for fax detection in legacy mode, if there are routes still running in this mode that do not have email addresses specified.

**Error Correction Mode**

Yes/No: Whether to use Error Correction Mode (ECM)

**Maximum transfer rate**

Maximum transfer rate used during fax rate negotiation.

**Minimum transfer rate**

Minimum transfer rate used during fax rate negotiation.

**Default Paper Size**

Letter/A4: The default paper size. This specifies the size that should be used if the document does not specify a size. If the document does specify a size, that size will be used.

**Save**

After making changes, click the Submit button and then click the Apply Config button.
