

CallerID Lookup Sources Module

THIS WIKI HAS BEEN UPDATED FOR VERSION 13 OF YOUR PBX GUI.

What is the CallerID Lookup Sources Module used for?

A Lookup Source lets you specify a source for resolving numeric caller IDs of incoming calls to names. You can then link an inbound route to a specific CID source. You can also install the Phonebook module to have a small number to name association.

How is the CallerID Lookup Sources Module related to the other Modules?

Once your lookup source is set u,p it can be used by "Inbound Routes" to modify the name field that displays on your phone's caller ID display.

How Do I Get to the CallerID Lookup Sources Module?

- Log in to the PBX UI.
- On the top menu click **Admin**
- In the drop down click **CallerID Lookup Sources**

Once your source is created, it can be used when creating or editing an inbound route.

- On the top menu click **Connectivity**
- In the drop down click **Inbound Routes**

Usage
