Overview of Metered Services

Prepaid metered services include toll-free calling, international calling, outbound T.38 faxing, SMS Text Messaging softcap bursting, and concurrency bursting. Payments for these services are made through our "Top Up" feature. Top Up is automatically enabled if you activate any of these metered services. Any new automated charges below the top-up amount, not including purchases from the store or your normal monthly service changes, will use the top-up balance. These charges may include porting and e911 fees.

When any metered service is switched "On," causing Top Up to be enabled for the first time, a Top Up charge of \$25 will be placed into your "reserve account." Any per-minute usage fees will be deducted from this account until the account falls below its minimum balance (default is \$5). When that happens, we will automatically charge your card the "Top Up" amount that you set with us. The default (and minimum) amount for a Top Up is \$25, but you can increase this. The amount for active calls are only deducted from your top up balance as the calls are completed. This can cause the effect of exceeding your top up balance and going negative. For example if you had 20 calls established all using Bursting mode and each of those calls lasted 30 minutes the charge for each call is not deducted from the Top Up until the call ends which would allow you to go below the Top Up dollar amount you have set. **Do not use Top Up as a fraud protection on your system.** You are responsible for all calls on your account.

For example, if you set a minimum balance of \$5 and a Top Up amount of \$50, we will charge you \$50 as soon as your account balance decreases to \$5. This will bring the funds in your reserve account back up to \$55.

We only Top Up your account a maximum of twice per 24 hours. If your reserve account reaches \$0, we may restrict you from being able to use any new metered services until more funds are added but existing calls will remain active, meaning that your account can go negative. In order to avoid metered service interruptions, you'll want to set your Top Up amount high enough to cover your expected daily usage, at a minimum. We also recommend that you set the Top Up amount high enough to provide a "buffer" in case we ever run into problems charging your credit card. This would give you time to respond to any notifications we send you regarding failed charges, and correct the issue before your reserve account drops to \$0.

Top Up charges will show up on your SIPStation statement at your next billing renewal date as payments on your account with a description of "ThresholdTopUps."

How to Manage Metered Services and Top Up Settings

- [Log in to the SIPStation Store.](#)

- Click on **My Account** in the navigation menu.

Enabling/Disabling Top Up and Metered Services

Within the **My Account / Account Configuration** section, find **Metered Services**.

- **If Top Ups Haven't Been Set:** You'll see the default minimum Top Ups set. Click the **Add** button to set up amounts.

ⓘ Top Up Settings

Low balance: **\$5.00**

Top Up Amount: **\$25.00**

[Update](#)

- **Enabling Top Up and Metered Services:** The **On/Off** switches enable/disable a service. When you switch any of the metered services to **On** (green), you will see the Top Up settings appear as shown below.

ⓘ International Toll Calls	ⓘ International Rate Deck	<input type="checkbox"/>
ⓘ T38 Faxing	ⓘ 2.4 cents/min US Calls	<input type="checkbox"/>
ⓘ SMS services	ⓘ On/Off-Net: free/1 cents/msg	<input checked="" type="checkbox"/>
ⓘ Softcap Bursting	ⓘ In/Out/CAN: 1.9/2.9/3.9 cents/min	<input type="checkbox"/>
ⓘ Concurrency Bursting	ⓘ In/Out/CAN: 1.9/2.9/3.9 cents/min	<input type="checkbox"/>

- **Disabling Top Up and Metered Services:** Since Top Up is automatically enabled if you are using any metered services, you will need to **turn off ALL metered services** in order to prevent future Top Up charges on your credit card. To do that, set the switches to **Off** (gray) for all metered services. Your Top Up amounts will still show up, but metered services will be disabled and your credit card will not be charged for further Top Ups.

Please note: No refunds are issued for prepaid (metered) services. Please see our SIPStation Terms and Conditions for details.

Changing Your Low Balance Threshold and Top Up Amount

- You can click the **Update** button in the Top Up Settings section to change either of the amounts.
 - **Low Balance:** When your reserve account decreases to this amount, it will trigger a charge on your credit card for the Top Up Amount.
 - **Top Up Amount:** The amount to be charged to replenish your Reserve Account.
